WORK EXPERIENCE

Carelon Global Solutions, Bangalore

Associate Software Engineer

Sept 2024 – Present

- **Organized the TDM Monthly Connect** for 50+ onshore/offshore participants, facilitating discussions on project progress, technical challenges, and delivery accomplishments; **recognized with 250 IMPACT Points** for the contribution.

AI Transcript Intelligence – RAG-Powered Audio/Video Transcription Platform *React, FastAPI, AWS S3, Amazon SQS, MongoDB*

- Built a full-stack AI transcription and transcript-intelligence platform processing **5K+ files/month** through an asynchronous AWS pipeline using **S3, MongoDB, Amazon SQS**, and Python background workers.
- Engineered file validation, job creation, retry/stop workflows, progress tracking, and automated transcript delivery, improving reliability across the transcription pipeline.
- Designed a Retrieval-Augmented Generation (RAG) chat interface using vector embeddings and similarity search, enabling grounded querying of **2+ hours of recorded content** in seconds.
- Implemented video-to-audio extraction, large-file chunking, timestamp-aware transcript merging, and structured segment storage, achieving **97.5% transcription/diarization accuracy** in company validation tests while supporting recordings up to **5 hours**.
- Delivered a responsive React UI for uploads, file management, transcript viewing, and chat history, integrating the platform across **5K+ users and 30+ teams**.

CVS Data Lake – Full-Stack Data Exploration Platform

Angular, Spring Boot, Oracle, JDBC, RxJS

- Developed a full-stack healthcare data search platform using Angular and Spring Boot, implementing reactive search forms, dynamic filters, REST APIs, and paginated result views across member, claim, prescription, and opportunity data.
- Engineered metadata-driven search with dynamic SQL generation, source-system mapping, and configurable result columns, while implementing frontend validation, debounced interactions, and dynamic result rendering.

EDP Sales – Dynamic Enterprise Search Tool

Angular, Spring Boot, Oracle, JDBC, RxJS

- Built a full-stack enterprise sales-search application using Angular and Spring Boot, supporting ID-based and advanced multi-criteria search with reactive forms, conditional validation, pagination, and dynamic result rendering.
- Engineered metadata-driven SQL generation using Oracle/JDBC, dynamically resolving tables, columns, aliases, and query conditions without hardcoded logic, with environment-specific database connectivity.

Spider Contract Republish – Batch Operations Tool

Angular, Spring Boot, Kafka

- Developed a full-stack contract republish application using Angular and Spring Boot, supporting single/bulk workflows, Excel uploads, validation, task tracking, and paginated task history.
- Engineered Quartz-based scheduled validation with DB2 integration, implementing task/subtask lifecycle management, retry/retrigger workflows, live status monitoring, and automated email notifications.

Claims Medicaid – Metadata-Driven Search Module

Spring Boot, Oracle, MongoDB

- Developed a full-stack Medicaid claims-search module using Angular and Spring Boot with dynamic search criteria, validation, pagination, and environment-specific data retrieval.
- Implemented metadata-driven MongoDB aggregation and integrated DAAS/GraphQL APIs for dynamic filtering, projection, and claims data retrieval.

CodeClause, Pune

Intern

Aug 2023 - Sept 2023

- Developed a cross-platform Signal Clone application (Android, iOS, and web) using React Native, Firebase, Expo, and React.js.

PERSONAL & AI ENGINEERING PROJECTS

ClarityAI — Multilingual Audio Intelligence & Conversational RAG Platform

August 2026

React, FastAPI, Whisper Large-v3, LLaMA 3.3, BGE-M3, GPT OSS, Qwen, Groq LPU

- Built a **two-stage multilingual RAG pipeline** using **1,024-dimensional BGE-M3** embeddings + cross-encoder reranking, with bge-reranker-v2-m3 cross-encoder reranking (**Top-20 → Top-10**); integrated Qwen 3.6 (27B) for deep multilingual reasoning with automated failover to GPT-OSS (20B/120B), boosted final answer accuracy from **55% → 100% (+45 pp)** on a **50-question domain benchmark** with **zero hallucinations** and precise [mm:ss] timecode grounding.
- Engineered production AI infrastructure with semantic retrieval, multilingual query handling, and model-memory profiling; developed FastAPI services with a **thread-safe sliding-window rate limiter (2 requests/60s/IP)**, proxy-aware

X-Forwarded-For resolution, exact Retry-After calculation, and pre-computation request interception to prevent unnecessary embedding/reranking/LLM calls; synchronized **HTTP 429** responses with a React live cooldown UI.

- Developed an end-to-end multilingual AI web application with **React/Vite + FastAPI**, **Whisper Large-v3** transcription, and **LLaMA 3.3 70B** structured speaker diarization, and Qwen 3.6 for multilingual and GPT-OSS for English-only conversational intelligence; conversational RAG, vector search, persistent transcript storage; implemented **16 kHz audio normalization** and **adaptive 35–80s chunking**, validated with **zero dropped words or clipped syllables**.

Chef Llama – AI Recipe Generator App →

June 2026

React 19, FastAPI, LangChain, Llama-3, Vercel Serverless, Web Speech API

- Built an AI-powered culinary assistant using **React 19 and FastAPI**, orchestrating structured LLM workflows with **LangChain and Llama-3** via Hugging Face.
- Designed a secure API-proxy architecture with custom JSON parsing and schema validation, enabling reliable **calorie/macronutrient tracking and dynamic portion scaling**.
- Integrated the **Web Speech API** for step-by-step audio narration and implemented print-ready exports for recipe accessibility.

HG's Stock Prediction & Analysis Platform →

May 2026

Node.js, Express, JavaScript, Polygon.io APIs, Hugging Face Inference API, Vercel Edge

- Developed a **serverless full-stack stock analysis platform** on Vercel Edge, integrating Polygon.io market data with Hugging Face LLM inference for AI-generated financial summaries.
- Implemented **dual-layer caching** for market data and AI reports to improve performance, reduce API usage, and respect third-party rate limits.
- Engineered client-side state management with vanilla ES6 modules and built a dependency-free UI with dynamic SVG charts and theme toggling.

SKILLS

Languages: Python, Java, C/C++, JavaScript (ES6+), TypeScript, SQL, HTML/CSS

Frameworks & Libraries: LangGraph, LangChain, FastAPI, Spring Boot, Spring Data JPA, Angular, Node.js, Express, React, React Native

AI / Agentic & RAG: LLM API Integration, Prompt Engineering, Tool Calling, Agentic Workflows, Retrieval-Augmented Generation (RAG), Vector Embeddings, Similarity Search, Hugging Face Inference API

Technologies & Tools & Data: Docker, Vercel Serverless/Edge, ServiceNow, Kafka, PostgreSQL, MongoDB, Oracle DB, MySQL, Firebase, AWS S3, Amazon SQS, Postman, Git/GitHub, Polygon.io APIs, Google Gemini API, Web Speech API

CERTIFICATES

Coursera: Introduction to FastAPI and Backend Development Fundamentals **Coursera:** Learn React **Coursera:** Git & GitHub by Google

EDUCATION

NMIT Bangalore

Oct 2020 - Jul 2024

B.E. in Information Science and Engineering

CGPA: 8.5/10

Relevant Coursework: OOP, Databases, DSA, UNIX, Python, AI, Java, Network Security, Web Programming, OS, Computer Networks, Machine Learning, NLP
